

INF 385T: Special Topics in Information Science Natural Language Processing and Applications

Mondays 12:00 Noon-3:00PM

Location: UTA 1.208

Instructor: [Dr. Abhijit Mishra](#) (he/his)

Email: abhijitmishra@utexas.edu

Office Hours (through zoom only)

Tuesday 8:00AM - 10:00AM

Zoom link: <https://utexas.zoom.us/j/8979599959>

Meeting ID: 897 959 9959

(Install zoom and Login using UT credentials)

Canvas: <https://utexas.instructure.com/courses/1367023>

Communication and Asking for Help

Please ask all questions that are applicable to the entire class on Canvas, so that others may benefit from the discussion. Only use email for questions unique to individual circumstances; in those cases, please address all questions to abhijitmishra@utexas.edu

Course Description

Natural Language Processing (NLP) is concerned with interactions between computers and humans through the medium of human languages. It involves analyzing, understanding, and generating human language, making it possible for machines to interpret and respond to human speech and text. NLP is currently making significant contributions to modern technological advancements and serves as the backbone of crucial applications such as question answering, human language translation, summarization, sentiment and emotion analysis, search and recommendation, and information extraction in various domains such as healthcare, finance, legal, libraries and education and beyond.

The proposed graduate-level course aims to cover fundamental concepts in Natural Language Processing / Computational Linguistics and how they are used to solve real-world problems. Classes in each week will be divided into two segments: **(a) Theory and Methods**, a concise description of an NLP concept, and **(b) Practicum**, a hands-on session on applying the theory to a real-world task on publicly available multilingual text datasets.

Intention and Objectives

The objective of the course is to provide a bird's eye view of the field of NLP and enable students to make informed decisions while choosing from different career options, i.e., working on an NLP-based cutting-edge product, joining the industry in an NLP-centric role, or pursuing a doctoral study or conducting doctoral research specializing in NLP or computational linguistics.

By the end of the course, the goals for the students are to:

1. Understand the process of garnering and pre-processing a large amount of multilingual textual data from various domains and sources.

2. Characterize the processes to store, load, pre-process multilingual data and apply language processing operations such as normalization, tokenization, lemmatization, chunking and machine readable representation (vector) extraction.
3. Train machine learning algorithms for natural language understanding and generation and evaluate their performance.
4. Learn to extract information from unstructured text and represent them in the form of knowledge graphs
5. Learn to use existing knowledge graphs, ontologies and lexical knowledge networks for predictive analysis on text
6. Propose a novel product/research-focused idea (this will be an iterative process), design and execute experiments, and present the findings and demos to a suitable audience (in this case, the class).

Prerequisites

[1] INF 380P: Introduction to Programming in Python or equivalent programming coursework

The proposed ML is applied in nature and there is a lab session in each class where students will code in Python. While the instructor will provide handouts for python basics, there is no way a student without any knowledge in programming will be able to pick up and fully participate in classes. Hence, INF380P (or equivalent programming course) is a necessary prerequisite.

[2] INF385T-Introduction to Machine Learning or equivalent ML coursework

Students are expected to have been exposed to harnessing and processing data, and apply traditional machine learning algorithms (such as Logistic Regression, SVMs, Decision Trees and Feed Forward networks). INF385T may be treated as a co-requisite but it is preferable to complete INF385T before registering for the NLP course. Alternatively, students may opt for a combination of the following courses (or courses that are similar in nature):

SDS 321 - Introduction to Probability and Statistics

SDS 323 - Statistical Learning and Inference

CS-329E: Elements of Data Analytics

INF385T - Artificial Intelligence in Health

OR Undergraduate Courses:

I310D: Introduction to Human Centered Data Science

I320D: Topics in Data Science – Applied Machine Learning with Python

Instruction Modality

Class meetings will be **in person**, with some exceptions, dependent on the state of the COVID-19 pandemic. Only if we are unable to meet in person, classes will be held virtually via Zoom. The classes will consist of a mixture of lectures and hands-on sessions. As of now, there are **no plans to record lectures**.

Accommodations for Students with Disabilities

The university is committed to creating an accessible and inclusive learning environment consistent with university policy and federal and state law. Please let me know if you experience any barriers to learning so I can work with you to ensure you have equal opportunity to participate fully in this course. If you are a student with a disability, or think you may have a disability, and need accommodations please contact Services for Students with Disabilities (SSD). Please refer to SSD's website for contact and more information:

<http://diversity.utexas.edu/disability/>. If you are already registered with SSD, please deliver your Accommodation Letter to me as early as possible in the semester so we can discuss your approved accommodations and needs in this course.

Required Materials

There is no required textbook for this course. While most of the reading material will be available online at no cost, the following books should be accessed and / or purchased.

Required books:

1. Dan Jurafsky and James H. Martin. 2006.

Speech and Language Processing. Unofficial copy: [https://pages.ucsd.edu/~bakovic/compphon/Jurafsky, Martin.-Speech and Language Processing_ An Introduction to Natural Language Processing \(2007\).pdf](https://pages.ucsd.edu/~bakovic/compphon/Jurafsky,Martin.-Speech%20and%20Language%20Processing_An%20Introduction%20to%20Natural%20Language%20Processing%20(2007).pdf) or buy from <https://www.amazon.com/Speech-Language-Processing-Daniel-Jurafsky/dp/0131873210>

2. Manning, C., & Schütze, H. (1999). Foundations of statistical natural language processing. MIT press. Unofficial Copy: [https://doc.lagout.org/science/o_Computer Science/2_Algorithms/Statistical Natural Language Processing.pdf](https://doc.lagout.org/science/o_Computer%20Science/2_Algorithms/Statistical%20Natural%20Language%20Processing.pdf) or buy from https://www.amazon.com/Foundations-Statistical-Natural-Language-Processing/dp/0262133601/ref=pd_lpo_scl_3/133-6690059-3136500?pd_rd_w=G9hpl&content-id=amzn1.sym.116f529c-aa4d-4763-b2b6-4d614ec7dc00&pf_rd_p=116f529c-aa4d-4763-b2b6-4d614ec7dc00&pf_rd_r=PD46FJR8DE5CFANKR2V6&pd_rd_wg=PKsq&pd_rd_r=8d765a26-c155-4d8c-b23a-d5dc59621b5c&pd_rd_i=0262133601&psc=1

Books that can be optionally purchased (optional)

3. Kamath, U., Liu, J., & Whitaker, J. (2019). Deep learning for NLP and speech recognition (Vol. 84). Cham, Switzerland: Springer.

Required Devices

This course requires students to bring their laptop computers, although it is device agnostic (PC and Mac preferable but do let me know beforehand if you are working with any customized hardware+ OS , something like Raspberry PI board + Linux) . Students will be required to install Python, SQL and Jupyter notebooks. For resource heavy exercises, we may use Google Colaboratory.

Class Participation

Students are expected to attend every class and actively engage themselves in class discussions and **complete the lab tutorial at the end of every session**. They may proof-read, polish and submit the tutorial by 11:59PM on the class day.

Assignments and Course Project

The class format is split between reading and coding assignments for the first half of the semester followed by a project the second half of the semester.

1. Assignments

FIVE assignments will be given in the first half of the semester. Each assignment may have either (a) a theoretical question based on weekly assigned readings or (b) a coding exercise similar to the practicum or both. Assignments are intended to bring conceptual clarity, stimulate computational thinking and emulate practical NLP implementation scenarios. Moreover, students will be encouraged to reuse the code from the coding assignments in their course projects.

2. Course Project

The goal of the course project is to promote effective planning, execution, and communication of an **original** NLP-centric product/research idea. Assignments related to the course project will be related to (a) Project Planning (b) Gathering Resources (c) Experiment Design and Execution, and (d) Preparing presentation, report, and demo. Students will be required to present before the class and prepare and submit a report in the prescribed format provided during project announcement in Canvas.

Examination:

A single **in-class** quiz, worth a total of 50 points, will be administered. The quiz will comprise a maximum of 5 questions and is scheduled to last no longer than 2 hours. This examination is designed to be open book/notes; however, access to the internet will not be allowed.

Important Dates:

1. **October 13, 2023** : Group Formation for Project/Activities
2. **October 30, 2023** : In-class Quiz (5 questions, 50 points)
3. **November 6, 2023**: Preliminary proposal due for group project
4. **November 27, 2023**: Group project work in progress presentation and feedback soliciting (5 minutes per group and counted towards class activity)
5. **December 4**: Final presentation of group project (Max. 15 minutes per group)
6. **December 8**: Final project-report submission
7. **December 12 (tentative)**: Submission of final grades by the instructor

For holidays and breaks and other important dates visit UT academic calendar here <https://registrar.utexas.edu/calendars/23-24>

Late Work and Missed Work

In an effort to accommodate any unexpected personal events, I have enacted a **grace policy of two days** for this course. You do not have to utilize this policy, but if you find yourself struggling with unexpected personal events, I encourage you to email me as soon as possible (in advance of the due date) to notify me that you are using our grace policy. You may either have a two-day grace period for one assignment, or you may have 2 one-day extensions for two different assignments. The only absences that will be considered excused are for religious holidays or extenuating circumstances due to an emergency. If you plan to miss class due to observance of a religious holiday, please let us know at least two weeks in advance. You will not be penalized for this absence, although you will still be responsible for any work you will miss on that day if applicable. In the event of an unexcused absence, we do not guarantee the opportunity to make up missed in-class work, but one may be granted. Check with us for details or arrangements.

Grading Policies

Course grades will be made up of the following components. Final letter grades will be awarded according to the grade cutoffs below, including pluses and minuses.

Grade Component	Percentage
Attendance, Participation in class and Lab Completion	20%
In-class quiz	10%

Grade Component	Percentage
Five Assignments	40%
Final Project (presentation and report)	30%

Grade Breaks

Grade	Cutoff
A	94%
A-	90%
B+	87%
B	84%
B-	80%
C+	77%
C	74%
C-	70%
D+	67%
D-	60%
F	< 60%

Course Outline

All instructions, assignments, readings, rubrics and essential information will be on the Canvas website. Check the site regularly and use it to ask questions about the course schedule. Changes to the schedule may be made at my discretion and if circumstances require. For example, we might want to slow down, speed up or drop certain topics depending on student input. It is your responsibility to note these changes when announced. Moreover, please note that the readings provided are preliminary and may be supplemented with additional resources as the course progresses.

1. WEEK 1. Introduction to Natural Language Processing

Lecture(s): Course Overview, Ambiguity, Multilinguality Fundamentals layers of NLP, Applications

Practicum(s): Python Basics and File, String and Document Processing, Frequency Analysis and Visualization

Readings: None

Optional Readings:

[1] Chapter 1: Introduction , Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

[2] <https://cs.nyu.edu/~davis/ai/ambiguity.html>

2. WEEK 2. Lexical Analytics : WORDS

Lecture(s) : Morphology and morphological diversities across close and distant languages, representing words, featurizing words, word-vectors, distributional semantics

Practicum: Week 1 practicum continued, Processing and cleaning textual data, text normalization, morphological analysis (stemming and lemmatization), Feature extraction from words, word vectors

Readings:

[1] Chapter 3. Words and Transducers, Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

[2] Bag of words and N-grams: https://en.wikipedia.org/wiki/Bag-of-words_model

[3] NLP: Word Embedding Techniques for Text Analysis

<https://medium.com/sfu-csmp/nlp-word-embedding-techniques-for-text-analysis-ec4e91bb886f>

Optional Readings:

[1] Word Embeddings <https://people.eng.unimelb.edu.au/mbouadjenek/papers/wordembed.pdf>

Assignment 1: Keyword extraction from text (Posted on Canvas)

3. WEEK 3. NO CLASS (Labor Holiday)

4. WEEK4. Syntax Analysis : SENTENCES

Lecture(s) : Grammar and languages, Representing syntax, Shallow and Deep Parsing , Part of Speech Tagging, Constituency and Dependency parsing

Practicum : Using existing part of speech taggers, using existing Noun-clunkers, Multiword expressions extraction

Readings (skip the machine learning related portions):

[1] Chapter 5. Word Classes and Part-of-Speech Tagging, Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

[2] Chapter 13. Parsing with Context Free grammars and Chapter 14. Statistical Parsing. Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

Optional Readings (skip the machine learning related portions):

[1] Chapter 9, 10, 11, 12. Book: Manning, C., & Schutze, H. (1999). Foundations of statistical natural language processing. MIT press.

[2] <https://stanfordnlp.github.io/CoreNLP/parse.html>

Assignment 2: Noun compound and multiword expressions (Posted on Canvas)

5. WEEK5. Entity and Relationship Extraction- Approaches

Lecture(s) : Entity and relationship extraction, BIO Tagging details, Entities and Knowledge Graphs

Practicum: Relation extraction in healthcare, building knowledge graphs from text

Readings:

[1] Chapter 13 Section 13.5. Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

[2] Handout on Named Entity Recognition <https://web.stanford.edu/class/archive/cs/cs224n/cs224n.1106/handouts/InfoExtract-cs224n-2010-1up.pdf>

Optional Readings:

[3] Knowledge Graphs <https://arxiv.org/pdf/2003.02320.pdf>

Assignment 3: Multilingual entity tagging and evaluation

6. WEEK6. Machine Learning Methods for NLP

Lecture(s) : Classification and clustering Algorithms, Feature Engineering,

Practicum : Implementing text classifiers, feature engineering, evaluating model performance

Readings:

[1] Text classification pipeline: <https://www.oreilly.com/library/view/practical-natural-language/9781492054047/cho4.html>

[1] Vectorization Techniques in NLP: <https://neptune.ai/blog/vectorization-techniques-in-nlp-guide>

7. WEEK7. Structured Machine Learning

Lecture(s) : Sequence Labeling Problems, sequence to sequence learning, generative models, Hidden Markov Models

Practicum : Training PoS taggers from scratch using HMMs

Readings (focus on the machine learning related portions):

[1] Chapter 5. Word Classes and Part-of-Speech Tagging, Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

[2] Chapter 13. Parsing with Context Free grammars and Chapter 14. Statistical Parsing. Book: Jurafsky, D., & Manning, C. (2012). Natural language processing. Instructor, 212(998), 3482.

Optional Readings (focus on the machine learning related portions):

[1] Chapter 9, 10, 11, 12. Book: Manning, C., & Schütze, H. (1999). Foundations of statistical natural language processing. MIT press.

Assignment 4: Training of open source PoS taggers on finance data, financial storytelling based on PoS tags

8. WEEK8. Deep learning for NLP - I

Lecture(s): Introduction to Neural Networks and Back propagation, recurrent neural networks and Transformers

Practicum: Text classification using Neural Networks using PyTorch, using Recurrent Neural Networks for entity tagging

Readings:

[1] Quick introduction to neural networks (<https://ujjwalkarn.me/2016/08/09/quick-intro-neural-networks/> Links to an external site.)

[2] Neural Network with Python (<https://victorzhou.com/blog/intro-to-neural-networks/> Links to an external site.)

Optional Readings:

[1] Introduction - The Perceptron (https://web.mit.edu/course/other/i2course/www/vision_and_learning/perceptron_notes.pdf Links to an external site.)

[2] A Neural Network in 11 lines of Python Part 1 (<http://iamtrask.github.io/2015/07/12/basic-python-network/> Links to an external site.)

[3] Yann LeCun, Yoshua Bengio, Geoffrey Hinton, Deep Learning (<https://www.cs.toronto.edu/~hinton/absps/NatureDeepReview.pdf> Links to an external site.)
Nature 521, no. 7553 (2015): 436-444. doi:10.1038/nature14539

9. WEEK9. Deep learning for NLP - II

Lecture(s): Unsupervised and transfer learning. Introduction to Pre-training and Language Models

Practicum: Fine tuning and k-shot classification with BERT and GPT-2 for text classification task

Readings:

[1] K-means Clustering - A theoretical foundation <https://medium.com/@akshay.sinha/k-means-clustering-8ef58ca0d024>

[2] Transfer Learning for Machine Learning <https://www.seldon.io/transfer-learning>

[3] Transformers and pre-trained language models: <https://web.stanford.edu/~jurafsky/slp3/10.pdf>

Optional Readings:

[1] Bishop, C. M., & Nasrabadi, N. M. (2006). Pattern recognition and machine learning (Vol. 4, No. 4, p. 738). New York: springer. (Chapter 9 Section 1)

Assignment 5: Vector based text retrieval for library book search

10. WEEK10. NLP Applications

Lectures: Machine Translation, Question Answering, Summarization and Topic Modeling / Keyword extraction (non-detailed, details to be covered in an advanced course if offered)

Practicum: Text summarization example

Readings:

[1] Patwardhan, N., Marrone, S., & Sansone, C. (2023). Transformers in the Real World: A Survey on NLP Applications. *Information*, 14(4), 242.

11. WEEK11. In class QUIZ + Large Language Models and Prompt Engineering

Lecture(s): Prompt based Large Language Models, Transfer learning and reinforcement learning as the basis of LLMs, RLHF, LLMs and applications

Practicum: None

Readings: None

Quiz: In-class “open-book” quiz on topics covered so far

12. WEEK12. Large Language Models and Prompt Engineering (cont..)

Lecture(s): Prompt based Large Language Models, Transfer learning and reinforcement learning as the basis of LLMs, RLHF, LLMs and applications

Practicum: Prompting and prompt-chaining of open sourced LLMs for different NLP tasks

Readings:

[1] Liu, P., Yuan, W., Fu, J., Jiang, Z., Hayashi, H., & Neubig, G. (2023). Pre-train, prompt, and predict: A systematic survey of prompting methods in natural language processing. *ACM Computing Surveys*, 55(9), 1-35. (<https://dl.acm.org/doi/pdf/10.1145/3560815>)

[2] Tutorial on Prompt Engineering: <https://github.com/dair-ai/Prompt-Engineering-Guide/blob/main/lecture/Prompt-Engineering-Lecture-Elvis.pdf>

Project: Proposal and planning document due

13. WEEK13. Knowledge Networks + Pragmatics in NLP

Lecture(s): Knowledge networks and Ontology, WordNet, ConceptNet and DBPedia

Practicum: Feature extraction using lexical knowledge nets for fact verification in LLMs

Readings:

[1] Tiwari, S., Gaurav, D., Srivastava, A., Rai, C., & Abhishek, K. (2021). A Preliminary Study of Knowledge Graphs and Their Construction. *Emerging Technologies in Data Mining and Information Security: Proceedings of IEMIS 2020, Volume 3*, 164, 11.

[2] Pragmatics and Computational Linguistics, <https://web.stanford.edu/~jurafsky/prag.pdf>

14. WEEK14. Fall Break (NO CLASS)

15. WEEK 15. Project Progress Update + Career in NLP, Research Programs

Presentation: In class project progress presentation (5 minutes per group)

Lecture: Career in NLP, Jobs and PhD Programs, Interesting Topics for Summer Research / Independent Studies

Readings: None

16. WEEK 16. Final Project Presentation with Demo

17. WEEK 17. No Exam

Project: Final project report due

Mantra for Student Success : Navigating the NLP Course

- Achieve higher attendance, aiming for 100% to maximize exposure and engagement during lectures and practical exercises.
- Submit practicums and assignments promptly, recognizing that minor errors can be overlooked while focusing on continuous improvement.
- Prioritize transparency by appropriately citing tools, resources, and data sources, showcasing your commitment to ethical and accountable work.
- Approach in-class quizzes with a clear understanding and well-organized thoughts, leveraging your conceptual clarity to excel.
- If programming presents challenges, embrace deliberate practice to strengthen your skills and confidently navigate technical aspects.
- Embrace iteration as you prepare presentations, ensuring impactful task demonstrations, comprehensive analyses, and well-structured reports.
- Recognize that success in the NLP course is a result of these concerted efforts, culminating in your growth as a proficient and accomplished NLP practitioner.

Academic Integrity

Students who violate University rules on academic dishonesty are subject to disciplinary penalties, including the possibility of failure in the course and/or dismissal from the University. Since such dishonesty harms the individual, all students, and the integrity of the University, policies on academic dishonesty will be strictly enforced. For further information, please visit the Student Conduct and Academic Integrity website at <http://deanofstudents.utexas.edu/conduct>.

AI Tools Usage Policy:

The utilization of AI-powered tools, including platforms like ChatGPT, DALL-E, or any other large language/image generative models, to create content such as text, code, images, multimedia, or any related materials intended for assignments, quizzes, or projects that contribute directly to the evaluation of grades within this course is **strictly proscribed**. Exceptions to this rule apply only if the incorporation of such systems aligns with the specified objectives of the assignment or project. Breaching this policy may result in the initiation of proceedings related to student misconduct.

Should there be any suspicion surrounding the content submitted by a student, suggesting the involvement of an AI tool, I retain the authority to request clarification from the student. This clarification may be sought through email communication or arranged verbal discussions in the form of one-on-one meetings. In the event of any inconsistencies between the provided explanations and the submitted solutions, I reserve the right to instigate misconduct proceedings against the concerned student. Upon enrolling in this course, students inherently express their agreement to adhere to this policy as well as any forthcoming policies described below.

Course Material Sharing Policy

Unauthorized sharing or distribution of lecture notes, slides, or examination questions is strictly prohibited without prior permission from the instructors. Failure to adhere to this policy may result in the initiation of legal actions. In the event that class should be recorded, class recordings are reserved only for students in this class for educational purposes and are protected under FERPA. The recordings should not be shared outside the

class in any form. Violation of these restrictions by a student could lead to Student Misconduct proceedings.

Religious Holy Days

By [UT Austin policy](#), you must notify me of your pending absence as far in advance as possible of the date of observance of a religious holy day. If you must miss a class, an examination, a work assignment, or a project in order to observe a religious holy day, you will be given an opportunity to complete the missed work within a reasonable time after the absence.

Names and Pronouns

Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with differences of race, culture, religion, politics, sexual orientation, gender, gender variance, and nationalities. I will gladly honor your request to address you by your chosen name and by the gender pronouns you use. Class rosters are provided to the instructor with the student's chosen (not legal) name, if you have provided one. If you wish to provide or update a chosen name, that can [be done easily at this page](#), and you can [add your pronouns to](#) Canvas.

Basic Needs Security

Any student who faces challenges securing their food or housing and believes this may affect their performance in the course is urged to contact the Dean of Students for support. UT maintains the [UT Outpost](#) which is a free on-campus food pantry and career closet.

Mental Health Support

I urge students who are struggling for any reason and who believe that it might impact their performance in the course to reach out to me if they feel comfortable. This will allow me to provide any resources or accommodations that I can. If immediate mental health assistance is needed, call the Counseling and Mental Health Center (CMHC) at 512-471-3515 or you may also contact Bryce Moffett, LCSW (iSchool CARE counselor) at 512-232-2983. Outside CMHC business hours (8a.m.-5p.m., Monday-Friday), contact the CMHC 24/7 Crisis Line at 512-471-2255.

Land Acknowledgement

I would like to acknowledge that we are meeting on the Indigenous lands of Turtle Island, the ancestral name for what now is called North America. Moreover, I would like to acknowledge the Alabama-Coushatta, Caddo, Carrizo/Comecrudo, Coahuiltecan, Comanche, Kickapoo, Lipan Apache, Tonkawa and Ysleta Del Sur Pueblo, and all the American Indian and Indigenous Peoples and communities who have been or have become a part of these lands and territories in Texas.

Title IX Reporting

Title IX is a federal law that protects against sex and gender-based discrimination, sexual harassment, sexual assault, unprofessional or inappropriate conduct of a sexual nature, dating/domestic violence and stalking at federally funded educational institutions. UT Austin is committed to fostering a learning and working environment free from discrimination in all its forms. When unprofessional or inappropriate conduct of a sexual nature occurs in our community, the university can:

1. Intervene to prevent harmful behavior from continuing or escalating.
2. Provide support and remedies to students and employees who have experienced harm or have become involved in a Title IX investigation.
3. Investigate and discipline violations of the university's relevant policies.

Beginning January 1, 2020, Texas Senate Bill 212 requires all employees of Texas universities, including faculty, report any information to the Title IX Office regarding sexual harassment, sexual assault, dating violence and stalking that is disclosed to them. Texas law requires that all employees who witness or receive any information of this type (including, but not limited to, writing assignments, class discussions, or one-on-one conversations) must be reported. **I am a Responsible Employee and must report any Title IX related incidents** that are disclosed in writing, discussion, or one-on-one. Before talking with me, or with any faculty or staff member about a Title IX related incident, be sure to ask whether they are a responsible employee. If you would like to speak with someone who can provide support or remedies without making an official report to the university, please email advocate@austin.utexas.edu. For more information about reporting options and resources, visit <http://www.titleix.utexas.edu/> , contact the Title IX Office via email at titleix@austin.utexas.edu, or call 512-471-0419.

Although graduate teaching and research assistants are not subject to Texas Senate Bill 212, they are still mandatory reporters under Federal Title IX laws and are required to report a wide range of behaviors we refer to as unprofessional or inappropriate conduct of a sexual nature, including the types of conduct covered under Texas Senate Bill 212. The Title IX office has developed supportive ways to respond to a survivor and compiled campus resources to support survivors.
